In most of my tests, Photoshop CS6 took steeper than 4% drops, but the OneNote pen didn't seem to be affected. At the same time, I was buying ink cartridges (which I no longer carry with me, either). Occasional drop frames were evident. Some of the screen snapshots below were taken within such an event. Not specific to the CS6 release, but all are possible problems. I could be getting better of these problems with the software, but my understanding is Photoshop is the most complicated piece of software to examine for errors. Darken Mode only seemed to work in 256-color mode. This wasn't a problem with the CS6 release. There are some minor things I'd like to see fixed in the next version. The include the retina mode in the UI. The 100 percent detail option is a long time running feature. The fact the still works and more importantly, can be toggled on and off when the Z-Reverse and Desaturate options are used would be useful. High-dynamic-range imaging (HDR) tools are missing. Let's go back to the iOS and Android apps because we can never have enough of that. For some hardcore graphics designers, the Good Pencil app is well worth a look. With the Good Pencil for iPad app, you can use one of your extra four Apple Pencils as a limited Surface Tablet stylus, or as an extra first-party stylus for a Surface stylus. It is simple and quick, and useful for photo-editing tasks. You can replace your Surface stylus with it and it shouldn't add cost or time to the project. However, be aware of the issues with the Surface stylus—it has to be put in a slot to be charged and it has a battery which will need replacement regularly.

Photoshop has the tendency to really hide it's settings behind a huge "settings tab" nested inside "colors". It's not intuitive. It's just too big. I've streamlined the Photoshop interface and added some features. Now you can actually use the adjustments you want without having to go through an edit and save/restore menus. Don't get me wrong. I still have deep love for Photoshop. But how not to set up Photoshop toolbars ? The same thing is going on with macOS in general: huge setting configurations that obscure everything else. You'd think that Photoshop would learn from that, but they must have their reasons.
